## **SPECIFIC PARTS OF THE EUROPEAN TECHNICAL ASSESSMENT**

### **1 Technical description of the product**

- 1) HENSOTHERM®-System für Einzelleitung is a sealant, HENSOMASTIK® 5 KS SP used in combination with HENSOTHERM® 7KS Gewebe pipe wraps (ETA 16/0369) or HENSOTHERM® 7KS viskos sealant used alone, to form a penetration seal around single metallic pipes and plastic pipes, to reinstate the fire resistance performance of wall and floor constructions, where they have been provided with apertures for the penetration of services.
- 2) HENSOMASTIK® 5 KS SP, supplied in liquid form in cans, cartridges or tubes. HENSOTHERM 7KS Gewebe pipe wraps (ETA 16/0369) are also incorporated into the penetration seal where it is penetrated by single plastic pipes and insulated metal pipes.
- 3) HENSOTHERM® 7KS viskos, supplied in liquid form in cans, cartridges or tubes.
- 4) HENSOTHERM®-System für Einzelleitung contains no carcinogenic substances or mutagenic substances, flame retardants or antimicrobiological agents.
- 5) The applicant submitted a written declaration that HENSOTHERM®-System für Einzelleitung does not contain substances which have to be classified as dangerous according to Directive 67/548/EEC and Regulation (EC) No 1272/2008 and listed in the "Indicative list on dangerous substances" of the EGDS - taking into account the installation conditions of the construction product and the release scenarios resulting from there. An emission report has also been provided.

In addition to the specific clauses relating to dangerous substances contained in this European technical Assessment, there may be other requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Regulation, these requirements need also to be complied with, when and where they apply.

- 6) The use category of HENSOTHERM®-System für Einzelleitung in relation to BWR 3 (Hygiene, health and environment) is IA1, S/W2

**2 Specification of the intended uses of the product in accordance with the applicable European Assessment Document (Hereinafter EAD): EAD 350454-00-1104**

Detailed information and data is given in Annex A.

- 1) The intended use of HENSOTHERM®-System für Einzelleitung is to reinstate the fire resistance performance of flexible wall, rigid wall and rigid floor constructions where they are penetrated by single metal and plastic pipes.
- 2) The specific elements of construction that the system HENSOTHERM®-System für Einzelleitung may be used to provide a penetration seal in, are as follows:
  - a. Flexible walls: The wall must have a minimum thickness of 100 mm and comprise steel studs or timber studs lined on both faces with minimum 2 layers of 12.5 mm thick boards and incorporate an infill of stone wool insulation 50 mm thick and 60 kg/m<sup>3</sup>.
  - b. Rigid walls: The wall must have a minimum thickness of 100 mm and comprise concrete, aerated concrete or masonry, with a minimum density of 650 kg/m<sup>3</sup>.
  - c. Rigid floors: The floor must have a minimum thickness of 150 mm and comprise aerated concrete or concrete with a minimum density of 650 kg/m<sup>3</sup>.

The supporting construction must be classified in accordance with EN 13501-2 for the required fire resistance period.

- 3) The System HENSOTHERM®-System für Einzelleitung may be used to provide a penetration seal with single pipes (for details see Annex A).
- 4) Services shall be supported at maximum 300 mm from both faces of the wall.
- 5) On the basis of equivalent or more favorable properties, in general pipe insulations with a classification better than D-s3, d0 can be used in substitution of Armaflex HT. For example see the following list:

Armaflex AF	K-Flex H Duct
Armaflex LS	K-Flex SRC ECO
