

Kabi® Brush Cans

Kabi Brush Cans with patented brass pump (patent 96.626) and replaceable brush.

Kabi Brush Cans have been produced by Kabi in Denmark since 1937. Manufacture, assembly, sale and shipment take place at Hørsholm, 25 km north of Copenhagen.

Initially, Kabi Brush Cans were mainly used for oil-based products, but gradually it was discovered that the patented pump could be used to pump up a wide variety of other products.

Today, Kabi Brush Cans are used for such varied products as solvents, paraffin, glue, adhesives and petrol.

Kabi Brush Cans are now exported to 40 countries and to be found in all parts of the world.

Kabi also supplies Kabi Brush Cans as a customised OEM product.

KABI A/S is Denmark's leading manufacturer and wholesaler of lubrication equipment and solutions. Our lubrication equipment includes:

- Super Sprayers
- Grease Guns
- Grease Nipples

- Patent Pressure Oilers
- Pump Units for Anti Seize
- Lubricating Equipment

KABI® Brush Cans

Since 1937, our own-production patented KABI brush cans have been the professional user's preferred product world-wide.

The reason is the superior pump capacity and wide applicability of the patented brass pump enabling it to be used in many different industries.

The brush can applications include the following:

- Glueing of technical insulation
- Glueing of textiles and leather
- Oil lubrication of chains, wires and spindles
- Degreasing with petrol, turpentine, kerosene, etc.
- Application of anti-seize and compound
- Application of silicone-based products
- Application of hoof oil (horses)

The brush can is also called KABI Gluemaster due to its many glueing applications.

When the brush can is not in use, simply attach the airtight plastic cap to prevent the glue from hardening.

See reverse for selection of brush cans and accessory equipment.

KABI® Brush Can

Seit 1937 gilt unsere Serie patentierter KABI Pinselkannen aus eigener Herstellung als bevorzugtes Arbeitsmittel für Profis weltweit.

Der Grund dafür ist unsere patentierte Messingpumpe: Sie liefert einen hohen Pumpendruck und ermöglicht so den Einsatz der Kanne auf den unterschiedlichsten Anwendungsgebieten. Das macht die KABI Brush Can zu einem universellen Werkzeug für Handwerk und Industrie.

Hier einige Anwendungsbeispiele:

- Verleimen von Isoliermaterial
- Verleimen von Textilien und Leder
- Schmieren von Ketten, Drahtseilen und Spindeln mit Öl
- Entfetten mit Waschbenzin, Terpentin, Petroleum usw.
- Auftragen von Gleitmitteln
- Auftragen von Silikonprodukten
- Auftragen von Huföl (Pferde)

Wegen ihrer vielfältigen Einsatzmöglichkeiten im Bereich des Leimens wird die Pinselkanne auch KABI Gluemaster genannt.

Zur Kanne gehört eine luftdichte Abdeckkappe, die nach Gebrauch auf den Pinsel gesetzt wird – so trocknet der Leim nicht aus.

Auf der Rückseite dieser Broschüre finden Sie eine Kaufhilfe für die Auswahl von Pinselkannen und Zubehör.
